

SPYDER / FOOTWEAR

SPRING 2023

SPYDER TECHNOLOGIES

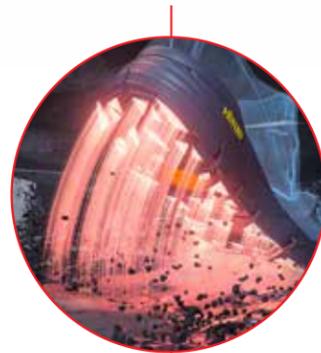

SPYDER TECHNOLOGIES

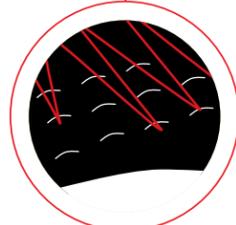

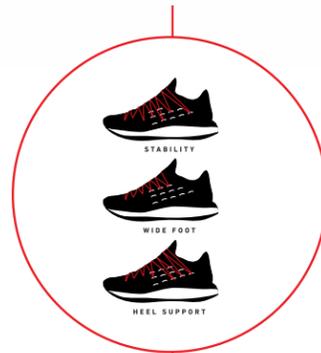

Rebound Technology™ is a multi-layered, cushion impact system with an antimicrobial shield to combat odor.

Water-Resistant Technology is a breathable, lightweight and flexible material that keeps you warm & dry.

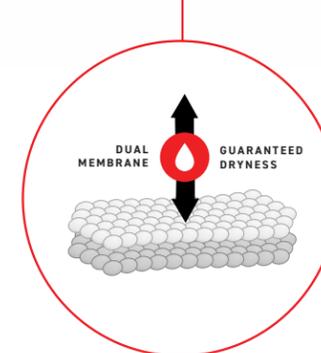

Vibram Megagrip offers excellent grip properties on both dry and wet terrains while maintaining a higher level of durability.

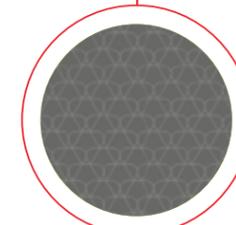

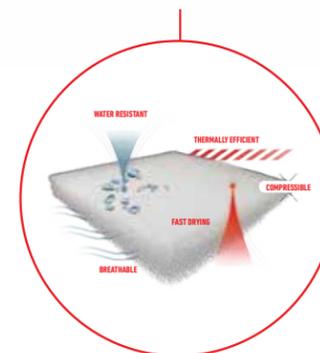

Adjustable Lacing System allows you to customize your fit. Designed with several loops that allow you to configure the lacing in whatever way you like. Options include: Lacing for Stability, Wide Foot, Narrow Foot, Heel Support, or remove the lace for a slip-on style.

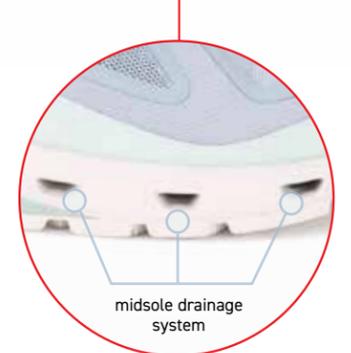

Ascent5 technology includes a 5-piece tooling with high tech suspension, shock absorption layers and extreme tread with traction for uphill & downhill terrain.

SpyDry, a dual waterproof layer features a membrane for guaranteed dryness.

Primaloft Insulation, made of 100% postconsumer recycled material, delivers loft and warmth for performance, and comfort.

DrainTech allows water to quickly drain out of shoe. The midsole drainage port system is designed to keep your feet comfortable on wet adventures.
